

Individuality. Curiosity. Possibility.

IBM Research AI: Full-Time Opportunities 2022

Artificial intelligence is having a profound impact on all aspects of our lives and is transforming how work is conducted in every industry. Today, AI systems are enabling businesses to personalize services, converse with customers, automate operations, optimize workflows, predict demand, and recommend next best actions. A common thread to our ambitious AI research agenda is to understand how AI systems and algorithms can be designed responsibly and produce effective outcomes for their enterprise users.

We are seeking candidates to help us advance our research and development agenda on artificial intelligence in areas including Natural Language Processing, Neuro-Symbolic AI, Human-Centered AI, Trusted AI, Knowledge and Reasoning, AI for Business Automation, AI Applications, AI Security, AI Hardware, Automated AI, Speech and Conversational AI.
